

## **With our new dental plan, everything lines up perfectly.**

At Delta Dental, we're introducing a new dental plan that lines up with the health needs of your employees. A compelling body of research shows the connection between a healthy mouth and overall health.<sup>1</sup> By paying for certain preventive services now, we can reduce the incidence of other health problems – and may improve medical outcomes. We're increasing age limits on sealants since they deliver an 85% reduction in cavities. We're covering additional cleanings and periodontal maintenance for at-risk populations such as pregnant women (to reduce the risk of preterm babies) and diabetics. And, single tooth implants will become a standard prosthodontic benefit. To find out how our new program can help you create a healthier workforce and bottom line, talk to your broker or Delta Dental account executive today.
